REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant invention is directed towards an unobvious improvement in the steam turbine seal clearance art. Specifically, the present application calls for a steam turbine comprising a diaphragm attached to the turbine casing and a packing ring mounted in a groove in the diaphragm. The packing ring comprises a seal shroud and a sealing means. The seal shroud is fabricated from a first material having a first coefficient of expansion and the diaphragm being fabricated from a second material having a second coefficient of expansion wherein the first and second materials are selected so that at a first temperature the gap between the turbine shaft and the diaphragm is larger than at a second temperature.

Prior art references such as Chu et al. (6,776,577) and Cromer et al. (6,065,754) do disclose sealing arrangements where the elements have different coefficients of thermal expansion, neither reference teaches or suggests the seal shroud having a different coefficient of thermal expansion. Cromer et al., for example, uses a centering ring having a higher coefficient of thermal expansion to accomplish the gap adjustment for the seal member.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
